

PLAST-AX

600L BOX PALLET BIN

AN EXTRACT FROM THE BIN BOOK

Specialist bin supplier to New Zealand industry

600L BOX PALLET

1000 x 1200 x 750mm (H)
40kg Tare weight (approx.)

The PLAST-AX 600L Box Pallet Bin has 4 way fork entry to facilitate pallet jack and forklift use on all sides.

It is the lowest wall height bin in our range and is a really nice little bin to handle product in and out of. This bin is twin walled to provide a clean uniform internal surface that has a nice taper and minimal ribbing.

This also provides additional insulation and often lends itself to being used to keep product iced and cool for transport and storage.

Stacks full with or without lid option.

600L

600L BOX PALLET

The 600L has a male/female locating lug on the top/base of each bin corner to facilitate stacking. This is continued through to the lid design.

If rotation is required we often look to the 800L offal bin for increased strength and rigidity; however if the smooth twin walled surface is an absolute must then we can certainly provide a rotational option on the 600L.

For this we use a HDPE base slat and fix them retrospectively to moulded-in female inserts.
